

PtVisible

The **PtVisible** function indicates whether the specified point is within the clipping region of a device context.

BOOL PtVisible(

```
HDC hdc,      // handle of device context
int X,        // x-coordinate of point
int Y         // y-coordinate of point
);
```

Parameters

hdc

Identifies the device context.

X

Specifies the logical x-coordinate of the point.

Y

Specifies the logical y-coordinate of the point.

Return Value

If the specified point is within the clipping region of the device context, the return value is TRUE; otherwise, it is FALSE.
